

EMP: the very best maintenance for top-level performance

Feel safe with EMP

In intense heat or during a sharp cold spell, deep underground or at great height: your Enerpac high-pressure hydraulic tools always have to perform to get the job done!

Regular checks and maintenance are therefore indispensable. After all, important parts may sometimes need repairing or replacing. That's why we have the Enerpac Maintenance Program (EMP). This program enables your Enerpac Authorised Service Centre to take care of all the required servicing of your high-pressure hydraulic tools.

This way your tools will always be safe to use, ready for use and perform to a high standard.

No costly downtime

Regular checks and maintenance of tools will prevent damage and breakdowns. The Enerpac Maintenance Program (EMP) will ensure that your Enerpac high-pressure hydraulic tools are maintained on time and in the best possible way, boosting safety, reducing operational risk and minimising highly costly downtime during your work. EMP helps keep your Enerpac tools available and ready for use at all times.

Enerpac-trained specialists carry out the various checks and other services quickly and efficiently. And they make sure your products are always in tip-top shape. You can also rely on them for advice on maintenance cycles, repairs and replacements.

Your Enerpac Authorised Service Centre:

Vital parts

EMP will check all vital parts of your hydraulic tools. Damage and leaks will be tracked down, the oil quality and level will be checked, and maximum pressure settings will be subjected to close inspection.

Contact your Enerpac Authorised Service Centre today to find out what EMP can do for you.

EMP

- **Work more safely**
- **Minimise operational risk**
- **Ensure tools are always available and in tip-top shape**
- **As good as new after repair**
