### Instructions for instrument selection in the catalogue

So that the customer gets the best equipment solution according to his requirements, we recommend this simple procedure using the following pages:

- Define the dimension of the fitting or interface (e.g. thread G2", DIN-flange DN25/PN16, etc.)
- Determine the electrical connection (e.g. terminal box, cable entry, plug, etc.)
- Find out the operating conditions, min. and max. operating pressure, temperature and specific gravity of the media at the max. operating temperature.
- With the size of the fitting and material of the instrument, a guide specification can be selected on pages 44 to 63.
- The full and final specification can now be generated by reference to the „type key“ on pages 71 to 73.
- With the type description and the technical operating conditions a price quotation can be made or the instrument can be ordered.
- Specification of the requested approval.

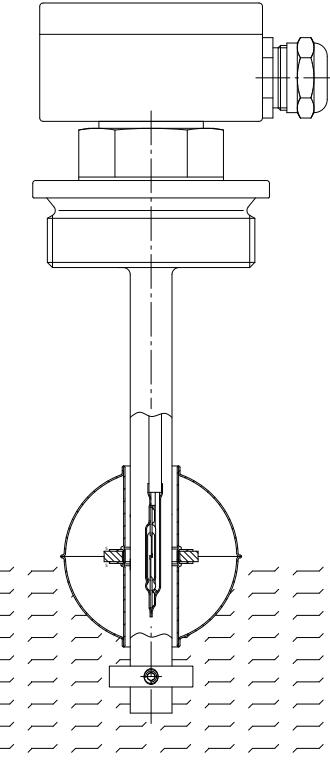

# Magnetic Float Switches 1003

## Description and function

Magnetic float switches work according to the float principle with magnetic transmission (permanent magnet / reed switch).

A magnet, which is built in the float actuates with its magnetic field, through the wall of the guide tube, one or more reed contacts.

By this way, volt-free opening, closing or change-over functions can be reached. Magnetic float switches are suitable for almost every liquid medium e.g. full or empty detector, to control pumps or valves or to signal filling levels. By the volt-free reed contacts, the magnetic float switches are an ideal switching element in connection with PLC controls.

## Additional installation / important notes

### 1. Contact protection

In the chapter 1011 you can find different contact protection relays. In connection with these instruments, the contacts of the magnetic float switches are only loaded by the smallest current and voltage.

### 2. Material

In the catalogue you find common materials such as stainless steel, brass, titanium, alloy, plastics or coatings. We also manufacture instruments in other materials on request.

### 3. Mounting note

The magnetic float switches can also be installed in the bottom of a container, e.g. type EVR-VS-L... -SV-1PVC changes to UEVR-VS-L... -SV-1PVC.

### 4. Definition of switching functions

The required switching functions will be produced on rising level on the defined level height.

### 5. Special designs

In this chapter 1003, you find approx. 50 versions as magnetic float switches can be constructed. As an innovative manufacturer we are always in the position to produce a customer-specific instrument, exactly as per your ideas.

Our performance and innovation readiness is always to see in connection with highest quality thoughts. With the confidence of our customers we have become to a leading manufacturer of level control instruments. Together we have developed the best solutions. Progress by innovation is only possible by close customer bond.

### 6. Manufacturing of bolts or float stoppers

Magnetic float switches will be equipped, depending on design, not with float limiting rings (float stoppers) but with welded bolts.

### 7. Temperature contacts and temperature probes

Technical data about temperature contacts and temperature probes you find on page 79.

# Magnetic Float Switches 1003

## Certificates / Approvals

### Certificates

#### SCHWEIZERISCHER VEREIN FÜR QUALITÄTS- UND MANAGEMENTSYSTEME

Certified according to ISO 9000 rev. 2000

#### SWISS TECHNICAL SERVICES AG

Approval as production factory, welding examination and procedure qualification incl. restamping certificate for the production of pressure tanks according to SVTI-regulation 501, 201

### Approvals

#### TECHNISCHER ÜBERWACHUNGSVEREIN DEUTSCHLAND (PED)

Approval as production factory for manufacture of pressure tanks according to AD HP 0, PED Pressure Equipment Directive 97/23/EG

#### SOCIETE NATIONALE DE CERTIFICATION ET D'HOMOLOGATION (ATEX)

Approval for the production of Magnetic Float Switches according to EU-Directive 94/9/EG

#### DEUTSCHES INSTITUT FÜR BAUTECHNIK (DIBT) (WHG)

Approval according to water regime law WHG

#### GERMANISCHER LLOYD (Building of ships)

Approval for the production of Magnetic Float Switches according to GL-regulations

#### BUREAU VERITAS (Building of ships)

Approval for the production of Magnetic Float Switches according to BV-regulations

#### REGISTRO ITALIANO NAVALE (Building of ships)

Approval for the production of Magnetic Float Switches according to RINA-regulations

#### 3A - Sanitary Standards (Dairy equipment)

Approval for the production of Magnetic Float Switches according to 3A-regulations

# Magnetic Float Switches 1003

## Approvals

As an innovative manufacturer of instruments for level control, we can offer to our customers systems according to different directives. The types of approval, applications and limits of use can be taken from the following specifications.

### Approvals

#### Ex

A large number of magnetic float switches from our standard range, or to customer requests, can be built according to the EU-Directive 94/9/EG with the protection types EEx ia IIC T3 to T6, EEx d T4 to T6 or dust Ex/D. By the combination of the instruments with the type key the catalogue shows with the Ex hexagonal logo which components can be used for Ex-instruments.

#### Temperatures of media:

##### EEx ia-instruments

T3	180 °C
T4	130 °C
T5	95 °C
T6	80 °C

##### EEx d-instruments

T4	120 °C
T5	95 °C
T6	80 °C

#### Electrical limit values:

Depending on applications

Type apparent on type plate, installation and operating manual

#### PED

Under the Pressure Equipment Directive 97/23/EG, any pressure vessel or instrument used within a pressurised system at 0,5 bar or above, has to conform to various categories. Depending on the design data or customer needs, manufacture of instruments is to either of the categories below.

##### Category II

Module A1

##### Category IV

Module B+D

#### WHG

The WHG-approval prescribes us, how safety overflow switches must be built for the storage of water-endangering liquids in containers and tanks. We have the possibility of building a large range of level sensors to the standard WHG §19.

#### GL / BV / RINA

Magnetic Float Switches for use in shipping can be manufactured to GL (Germanischer Lloyd), BV (Bureau Veritas) or RINA (Registro Italiano Navale) standards in large variety of design possibilities complete with controllers.
