Tightening spindles

0.6 – 1000 Nm

The modular construction of Rexroth tightening spindles enables a very precise adjustment to the tightening task at hand. Conformity with the VDI standard ensures that your tightening connections meet the highest safety requirements. The versatility of Rexroth tightening spindles not only guarantees safety but also a perfect design customized to your needs.

- ▶ Modular design, ideal adjustment to tightening case
- ▶ Maintenance-free for 1 million full-load cycles, long service life
- ▶ Process reliability and minimal waste thanks to real redundancy measurement
- ▶ Digital measurement transfer, maximum precision

Maximum flexibility in tightening spindle configuration – here are just some of the many options

**Tightening spindle with angle head**

- ▶ For high accessibility
- ▶ Also available with integrated measurement transducer

**Tightening spindle with offset output drive**

- ▶ For side-by-side arrangement with small center-to-center distances
- ▶ Also available with integrated measurement transducer

**Tightening spindle with transverse gearbox**

- ▶ Compact length
- ▶ Available for all sizes

**Tightening spindle with feed output drive**

- ▶ Integrated feed movement
- ▶ For use in connection with automatic bolt supply

Configure your tightening spindle

Numerous options

With a working range between 0.6 and 1000 Nm (higher torques on request) and a choice between straight output drives, offset output drives, feed output drives, and angle heads – with Rexroth components you can configure a tightening spindle that is customized to your individual requirements. We offer the offset output drive and angle head also with integrated measurement transducer. You can decide between having one measurement transducer or a second redundant one. We can provide the optimum spindle components for any task. Why not find the perfect tightening spindle for your tightening connection?

Depending on the size, the actual components may differ from those in the illustration.

1 Output drives

- The suitable output drive for every tightening position
- Special output drives for increased transverse forces, e.g. for wheel nutrunners, on request

2 Adapter A

- Connects planetary gearbox and output drive when operating without a measurement transducer

Tightening spindles size 2

Spindle bearing

- ▶ Working range 0.6 – 10 Nm
- ▶ Max. output drive speed 1000 rpm

Depending on the size, the actual components may differ from those in the illustration.

Features

- ▶ Various lengths with axial compensator
- ▶ Standard tool mounts
- ▶ Maximum efficiency
- ▶ Easy assembly due to flange connection
- ▶ Maintenance-free for 1 million full-load cycles

Angle head with spindle bearing

Axial compensator

To ensure troublefree operation, the angle head must always be operated with an output drive axial compensator, e.g. spindle bearing.

You can find more information in the planning instructions for angle heads in the Rexroth media directory at www.boschrexroth.com/mediadirectory

Offset output drive with integrated measurement transducer

- ▶ Working range 1.6 – 53 Nm
- ▶ Max. output drive speed 740 rpm

Depending on the size, the actual components may differ from those in the illustration.

Features

- ▶ Reduced center-to-center distances
- ▶ Torque measurement directly at the bolt
- ▶ Proximity switching digital measurement transfer
- ▶ Efficiency fluctuations do not affect measurements

*Accuracy is limited if operating below the working range.

To ensure troublefree operation, the angle head must always be operated with an output drive axial compensator, e.g. spindle bearing. For an output drive axial compensator, the following angle head/spindle bearing combinations are possible:

3W027 (0 608 810 042) – spindle bearing size 3 (catalog page 30)

3W050 (0 608 810 043) – spindle bearing size 3 (catalog page 30)

3W090 (0 608 810 044) – spindle bearing size 4 (catalog page 40)

Note: You can find component dimensions and 3D/CAD data on the Internet at www.boschrexroth.com/tightening

Tightening spindles size 4

Spindle bearing

- ▶ Working range 6–150 Nm
- ▶ Max. output drive speed 1000 rpm

Depending on the size, the actual components may differ from those in the illustration.

Features

- ▶ Various lengths with axial compensator
- ▶ Standard tool mounts
- ▶ Maximum efficiency
- ▶ Easy assembly due to flange connection
- ▶ Maintenance-free for 1 million full-load cycles

When configuring without a measurement transducer, the adapter connects the output drive and the planetary gearbox.

The transverse gearbox shortens the length of your tightening spindle by the installation length of the EC motor plus the installation length of the transverse gearbox.
The use of a transverse gearbox decreases the tightening spindle working area.

Tightening spindles size 4

Offset output drive with integrated measurement transducer

- ▶ Working range 15–342 Nm
- ▶ Max. output drive speed 1000 rpm

Depending on the size, the actual components may differ from those in the illustration.

Features

- ▶ Reduced center-to-center distances
- ▶ Torque measurement directly at the bolt
- ▶ Proximity switching digital measurement transfer
- ▶ Efficiency fluctuations do not affect measurements

*Accuracy is limited if operating below the working range.

To ensure troublefree operation, the angle head must always be operated with an output drive axial compensator, e.g. spindle bearing.

See page 17.

Tightening spindles size 4 Feed output drive

- ▶ Working range 6–136 Nm
- ▶ Max. output drive speed 1000 rpm

Depending on the size, the actual components may differ from those in the illustration.

Features

- ▶ Integrated feed movement
- ▶ In connection with automatic bolt supply
- ▶ Standard tool mounts and compressed air connections
- ▶ Easy assembly due to flange connection
- ▶ Maintenance-free for 1 million full-load cycles

Ergonomic, powerful, handy

The ErgoSpin is designed according to the latest findings in ergonomics and fits the user's hand like a glove. The ergonomics of the handle, its light weight, and the optimum arrangement of operating and display elements increase worker productivity.

- ▶ Fast commissioning
- ▶ Flexible stock-keeping: only 1 cable type for all variants
- ▶ Maximum precision thanks to digital data transfer
- ▶ Ergonomic handling due to integrated, mechanical interface for reaction torque supports
- ▶ Process reliability thanks to clearly arranged display elements
- ▶ CC-ErgoSpin variant for function-critical tightening jobs

**ESM**

Pistolgrip nutrunner with integrated powerful LED for tightening position illumination

**GripLine**

Right-angle nutrunner with plastic-covered angle head for protection against scratches and accidental contacts as well as a second grip

**SlimLine**

Right-angle nutrunner with slim angle head for high accessibility.

**VarioLine**

Zero-play spur gearing for free connection of crowfoot wrenches and special output drives

Hand-held nutrunner ESM ErgoSpin pistolgrip nutrunner for safety-critical tightening jobs

- ▶ With square tool mount, quick-change chuck, or 3/8" square tool mount
- ▶ Working range 2.4 – 35 Nm
- ▶ Max. output drive speed 1700 rpm
- ▶ Suitable for safety-critical tightening jobs in accordance with VDI/VDE 2862

Features

- ▶ Pistolgrip nutrunner, also suitable for hard-to-reach tightening positions
- ▶ With integrated powerful LED
- ▶ Standard tool mounts
- ▶ Tested for one million cycles under full load without maintenance

**ESM with square tool mount**

- ▶ Working range 2.4–35 Nm
- ▶ Max. output drive speed 1700 rpm

Working range	Max. output drive speed	Tool mount	Weight	Installation length	Code	Order no.
Nm	rpm		kg	mm

Output drives for ErgoSpin/CC-ErgoSpin VarioLine

VarioLine hand-held nutrunner becomes a tightening spindle

- Extended application options in combination with handling devices

- Can be used as a tightening spindle with output drive adapters
- Fully suitable for robot use

Angle heads

You can mount different angle heads on the ErgoSpin VarioLine. This makes your ErgoSpin hand-held nutrunner suitable for a variety of applications.

With an angle head for special output drives, you can e.g. mount a crowfoot wrench to the VarioLine.

VarioLine combination options with angle heads

Straight output drives

Straight output drives combined with the ErgoSpin VarioLine produce a straight nutrunner. The combination of VarioLine and straight output drives always delivers

an ergonomic solution for tightening cases of up to 12 Nm: whether vertically suspended, as a hand-held straight nutrunner, a hand-held application, or in connection with handling devices.

Nexo – intelligent cordless nutrunners

Rexroth intelligent cordless nutrunners join wireless technology with all the advantages of the proven ErgoSpin hand-held nutrunner for all category A safety-critical tightening jobs in accordance with VDI2862: results logging, output, and documentation.

- Fits into the existing infrastructure of any production environment
- Integrated control and power electronics eliminates necessity for multiple connected components
- An additional controller is no longer needed thanks to a direct Wi-Fi connection between nutrunner and access point.

Nexo cordless nutrunner

NXP pistolgrip nutrunner

- ▶ Working range 3.6 – 12 Nm
- ▶ Max. output drive speed 750 rpm

Features

- ▶ For troublefree working at hard-to-reach tightening positions
- ▶ Ergonomic design and maximum freedom of movement
- ▶ Graphic display: direct and clear display of the tightening quality
- ▶ Reliable availability of information regardless of position and wireless connection
- ▶ Quick parameterization on site

Control and power electronics

The hardware platform is based on cutting-edge technology and thus ensures investment security. It has been specially developed for industrial applications. The system box and compact system fully comply with the IP54 protection class.

- ▶ Modular design, ideal adjustment to the tightening case
- ▶ Maintenance-free for 1 million full-load cycles, long service life
- ▶ Process reliability and minimal waste thanks to real redundancy measurement, digital measurement transfer, maximum precision

Maximum flexibility in tightening spindle configuration – here are just some of the many options

One nutrunner – multiple nutrunners?

1 Compact system or modular system

1 tightening channel = CS351 Compact System	p. 98
2 to 40 tightening channels = 350 modular system	p. 104

350 modular system – where to store the system components?

2 BT card rack or SB system box

The card rack is designed for installation in a control cabinet.
Tightening systems without control cabinets are possible with the system box.

Universal communication – the KE communication unit

3 Configuration of the first BT card rack/first SB system box

VM power supply module	
KE communication unit	
SE control units	Max. 3 SE per BT/SP
LTS/LTE servo amplifiers (tightening spindle/ErgoSpin respectively)	Max. 5 LTS/LTE per BT/SB

1, 2, 3... and many more

4 Connecting multiple BT card racks/SB system boxes

Multiple BT/SB are connected to NK network couplers.	Configuration from 2nd BT/SB:
No KE is required from the 2nd BT/SB upwards.	Max. 3 SE per BT/SP
Another LTS/LTE can be inserted in its position.	Max. 6 LTS/LTE per BT/SB

CS351 Compact System

The operating and display units, as well as the connections, are arranged in a user-friendly, modern, and convincing design. The clear structure of the CS351 allows intuitive operation without any complicated configuration. The housing, which is no larger than a minitower, fully complies with protection class IP54. Its compact interior combines power electronics and Ethernet-based bus systems with the new high-performance 350 control generation.

- TFT with touchscreen
(or display)**
- Abrasion-resistant ID plate**
- Status display via LEDs**
- Easy-to-access
USB programming interface**

- ▶ Compact and powerful
- ▶ Clear system design
- ▶ Secure and fast commissioning
- ▶ Tightening results at a glance
- ▶ Clearly arranged control and display elements
- ▶ Sturdy: IP54, EMC severity level IV
- ▶ USB and Ethernet-based bus systems
- ▶ Flexible adaptation to new tasks

CS351 Compact System model variants

Compact System CS351...-G... High-quality TFT with touch screen and large viewing angle

- ▶ Resolution: 640x480
- ▶ Actual value display
- ▶ Tightening graph display
- ▶ Parameter changes
- ▶ Ethernet on board
- ▶ Tightening program selection

Compact System CS351...-D... Display version with DVI interface

- ▶ Actual value display
- ▶ Connection to external DVI monitor and input unit
- ▶ Ethernet on board

Note: For cable selection, see "Rexroth cables" from page 122.

CS351

- ▶ Dimensions (HxWxD): 358x210x253 mm
- ▶ Very easy suspension, even in tight areas
- ▶ Hinged, removable interface cover
- ▶ Highly flexible and future-proof due to interface modules
- ▶ IP54 protection class
- ▶ 120 V and 230 V power supply
- ▶ Mains connection cable for 230 V included in the scope of delivery
- ▶ Motor stop interface
- ▶ RCD
- ▶ Exchange connection cable – without tools

The speed of BG 4/5 motors is 15% lower in conjunction with compact controllers than in conjunction with modular controllers.

The torque of the BG 5 motors is 30% lower in conjunction with compact controllers than in conjunction with modular controllers.

CS351...IL

- ▶ Integrated logic
- ▶ Flexible programming according to IEC 61131-3
- ▶ Easy automation for the entire tightening process

CS351...NK

- ▶ Can be connected as an additional tightening channel to the KE350/KE350G IL via the network coupler cable
- ▶ Complete system bus diagnosis
- ▶ Central data output via the KE350/KE350G IL

CC-CS351 Compact System for CC-ErgoSpin

- For CC-ErgoSpin hand-held nutrunner control
- Use in function-critical tightening jobs

Features

- Secure and fast commissioning
- Tightening results at a glance
- Sturdy: IP54, EMC severity level IV
- USB and Ethernet interface
- Clear system design
- Flexible adaptation to new tasks
- Clearly arranged control and display elements

Compact System for	Code	Weight kg	Order no.
CC ErgoSpin	CC-CS351E-D	9.5	0608841289

Slots and connections

To ensure that the tightening system optimally matches your control environment today and in the future, it features three slots for interface modules, which are covered with dummy panels at the factory.

The CS351E-D... and CS351S-D... Compact Systems have an additional DVI interface to connect an external monitor and a corresponding USB feedback channel.

To gain a better understanding of the slots, see “CS351 Compact System” from page 98.

- 1 Slot A for type A interface modules
- 2 USB host interface
(only for CS351S-D and CS351E-D)
- 3 Interface to connect
an external DVI monitor
(only for CS351S-D and CS351E-D)
- 4 Slot for CF350 mass storage
- 5 Ethernet
- 6 Serial interface
- 7 Two USB interfaces
- 8 Motor stop interface
- 9 Two slots (B1, B2)
for type B interface modules

Note: For cable selection, see “Rexroth cables” from page 122.

Modular system

The SB356 system box and the BT356 card rack, made from durable stainless steel, are required in the modular system to support the control and power electronics.

Besides the VM350 power supply module, the BT/SB can also be equipped with up to six tightening channels. The tightening channels comprise an SE352 or SE352M control unit that controls up to two LTS350D servo amplifiers for tightening spindles or LTE350D servo amplifiers for ErgoSpin hand-held nutrunners. Mixed operation of tightening spindles and ErgoSpin on a SE352 or SE352M is possible at any time.

The KE350 or KE350G IL communication unit is responsible for internal and external system communication. It is inserted in the outermost BT/SB slot, instead of the sixth servo amplifier. When the KE350 or KE350G IL is inserted in the first SB or the

- ▶ Multi-channel tightening system
- ▶ Can be upgraded to up to 40 tightening channels
- ▶ Combination of tightening spindles/ErgoSpin
- ▶ Uncomplicated programming
- ▶ Either in card rack or system box
- ▶ Convenient installation thanks to modularity

The splash-proof SB356 system box is intended for operation without a control cabinet in an industrial environment.

The BT356 card rack is intended for installation in control cabinets.

first BT, up to 16 BT/SB can be connected via the NK350 or NK350S network coupler and NKL network coupler cables.

The flexibly programmable logic integrated in the KE350G IL is in compliance with IEC 61131-3 and gives the user countless automation options for the entire tightening process.

Unused slots must be closed off with dummy panels for safety reasons and for reasons of electromagnetic compatibility.

1 card rack/system box for up to 5 tightening channels and communication unit

BT	Card rack
SB	System box
VM	Power supply module
KE	Communication unit
SE	Control unit
LTS	Servo amplifier for tightening spindles
LTE	Servo amplifier for ErgoSpin hand-held nutrunners
NK	Network coupler

Combination of multiple card racks/system boxes for up to 40 tightening channels

Max. 6 tightening channels per BT/SB

Max. total length of all network coupling cables: 150 m

Maximum length of one network coupling cable: 50 m

Control of max. 40 tightening channels with one KE350 (up to 16 network couplers)

Point-to-point connection: defined physical conditions

Multi-colored LED on network coupler for network status display

Type and timing of the incoming signals are processed and supplied to the nearest NK350.

SB356 System Box

- ▶ To accommodate the control and power electronics for up to six tightening channels
- ▶ IP54 protection class

Features

- ▶ Designed for operation without control cabinet
- ▶ For networking of up to 16 BT/SB (with NK350 or NK350S network coupler and NKL network coupler cables)
- ▶ Compact dimensions
- ▶ High packing density
- ▶ Combination of hand-held nutrunner and stationary technology possible

Permissible configuration with BT356/SB356 Servo amplifiers

Planning assistance: system box and card rack configuration

One tightening channel consists of the following components:

- ErgoSpin hand-held nutrunner or tightening spindle
- Connection cable
- Control unit
- Servo amplifier

The KE350 or KE350G IL communication unit is responsible for internal and external system communication. If the appropriate control and power electronics are installed, both stationary tightening spindles and ErgoSpin hand-held nutrunners can be connected to and operated on the SB356 system box and the BT356 card rack. Mixed operation of stationary tightening spindles and ErgoSpin hand-held nutrunners on a system box or a card rack is possible at any time.

Not every configuration is permitted due to the fact that the power consumption of the servo amplifier depends

on the type of tightening spindle or ErgoSpin hand-held nutrunner that is connected. The maximum permissible peak current for up to six tightening channels in the card rack or system box is 140A. This is why you may only install components with a power consumption that does not exceed a total of 140 A.

Total power consumption (tightening spindles + ErgoSpin) ≤ 140 A

- ▶ Up to 40 tightening channels by combining multiple card racks/system boxes
- ▶ Maximum system reliability thanks to 100% digital data transfer
- ▶ Integrated system for hand-held nutrunners and stationary technology
- ▶ Scalable and open for extensions

Power consumption Ampere	Stationary tightening spindles				ErgoSpin hand-held nutrunners			
	45 A	28 A	14 A	7 A	50 A	33 A	18 A	11 A
Tightening spindle or ErgoSpin hand-held nutrunner	LTS350D servo amplifier + Tightening spindle size 5	LTS350D servo amplifier + Tightening spindle size 4	LTS350D servo amplifier + Tightening spindle size 3	LTS350D servo amplifier + Tightening spindle size 2	LTE 350D servo amplifier + ErgoSpin hand-held nutrunners ESA100S ESA150S ESA220S ESV073 ESV146	LTE 350D servo amplifier + ErgoSpin hand-held nutrunners ESA040... ESM012QD ESV005 ESV012

Example: wheel bolts

In this example, five wheel bolts on each side of the vehicle are tightened to 130 Nm using size 4 tightening spindles.

**Ethernet connection**

BT/SB power consumption
 $5 \times 28 \text{ A} = 140 \text{ A} (\leq 140 \text{ A})$

Up to 5 tightening spindles can be operated on the first system box/first card rack.

Networking with network coupler

System boxes and card racks can be connected using network couplers.

Example: motor connection

In this example, the camshaft bearing cap and the cylinder head are each tightened to the motor with double nutrunners (size 3 and 4 tightening spindles) with 15 Nm and 130 Nm respectively. In addition, small parts are tightened with right-angle and pistolgrip nutrunners.

**Networking with network coupler**

BT/SB power consumption
 $2 \times 28 \text{ A} + 2 \times 14 \text{ A} + 33 \text{ A} + 11 \text{ A} = 128 \text{ A}$
 $(\leq 140 \text{ A})$

Mixed operation with up to six tightening channels is possible on an SB356 system box or a BT356 card rack.

VM350 power supply module

- Used to supply power to all the slots in the BT356 card rack or in the SB356 system box.

Code	Order no.
VM350	0 608 750 110

Features

- One VM350 is required for each card rack or system box.
- 24 V interface (X1S1) on the front to ensure external power supply of the KE, SE, and LT in event of power failure or if the supply is switched off
- Motor stop interface
- 24 V power supply for external consumers

SE352 and SE352M control units

- To control and monitor the tightening process of up to two independent tightening channels per control unit
- Use in multi-channel tightening systems requires a KE350/KE350G IL communication unit.

Code	Order no.
SE352	0 608 830 262
SE352M	0 608 830 263

Example layout
SE352M with IM24V

Features

- Carries out system diagnosis and monitors all individual components of a tightening channel
- Tightening processes and rework strategies are simply and flexibly programmed via the BS350 operating system.
- Automatic recognition of individual components enables fast and secure start-up.
- The SE352M control unit is equipped with one free slot (on delivery, the SE352M control unit slot is sealed with a cover). An IM24V interface module can be inserted in this slot for communication with superior controllers.

Servo amplifiers for tightening spindles and ErgoSpin/CC-ErgoSpin hand-held nutrunners

- ▶ For EC motor control
- ▶ Integrated motor contactor

Code		Order no.
LTS350D	For all tightening spindles	0 608 750 125
LTE350D	For all ErgoSpin/CC-ErgoSpin hand-held nutrunners	0 608 750 126

Features

- ▶ The control parameters are transmitted digitally from the SE control unit to the LT servo amplifier
- ▶ LC display for tightening results and system information

KE350 and KE350G IL communication units

- To coordinate individual control units and organize the interfaces with external systems (e.g. PLC or central computer)

Code	Order no.
KE350	0 608 830 264
KE350G IL	0 608 830 265

Features

- System-internal communication with the control units occurs via a standard bus system
- One serial interface and three free slots for connecting to external systems
- Various interface modules are available for controlling and data communication
- On delivery, the slots in the KE350 and KE350G IL communication units are closed off with covers
- Integrated logics in KE350G IL: flexible programming in compliance with IEC 61131 3, enables countless automation options for the entire tightening process

Control cabinets

Ask us – we would be happy to advise you! With the BT356 card rack, the Rexroth modular system is ideally equipped for use in control cabinets. Benefit from our experience: we can offer you advice on which control cabinet is best suited to your production environment and how control and power electronics can be integrated easily. We provide control cabinets manufactured to your requirements as well as control cabinets in the following standard dimensions:

- 1800x600x500 mm (HxWxD)* for up to 18 tightening channels or 17 tightening channels plus KE350/KE350G IL for tightening spindles in sizes 2, 3, and 4 (size 5 and mixed configurations available on request)
- 2000x600x500 mm (HxWxD)* for up to 24 tightening channels or 23 tightening channels plus KE350/KE350G IL for tightening spindles in sizes 2 and 3 (sizes 4 and 5 and mixed configurations available on request)

The standard delivery color is RAL 7032.

Other options, e.g. other colors, are available on request.

Open and flexible: Interface modules

The interface modules are the connection between the tightening system and the company's IT. Today, Rexroth offers customers all common standards of fieldbuses such as PROFIBUS and DeviceNet as well as Ethernet-based fieldbus systems.

- ▶ Perfect network connection
- ▶ Connection between the tightening system, and the company's IT
- ▶ All standard fieldbuses
- ▶ Open, modular system concept for future standards

To ensure that the tightening system optimally matches your control environment today and in the future, free slots for interface modules are included on the CS351 Compact System, the KE350, and the KE350G IL.

On delivery, the slots are closed off with covers.

CS351...-D and KE350G IL have an additional DVI interface to connect an external monitor and a corresponding USB feedback channel.

	Slot	Fieldbus/designation	Code	Order no.	Description
	A	PROFIBUS DP	IMdp	0 608 830 266	► Data transfer via I/O level, e.g. for PLC functionality ► Insertion in the A slot of the KE350... or the CS351... ► Occupies a 400 byte address space on the fieldbus, which can be adjusted from 16I/16O points (2 bytes) to 512 I/512 O points (128 bytes), as well as 0-64 bytes ID code and 0-242 bytes data ► The logical assignment of the control signals is set using the BS350 operating system.
	A	DeviceNet	IMdev	0 608 830 267	► Data transfer via I/O level, e.g. for PLC functionality ► Insertion in the A slot of the KE350... or the CS351... ► Occupies a 512 byte address space on the fieldbus, which can be adjusted from 16 I/16 O points (4 bytes) to 512 I/512 O points (128 bytes), as well as a 0-64 bytes ID code ► The logical assignment of the control signals is set using the BS350 operating system.
	A	PROFINET IO	IMpni	0 608 830 272	► Complete PROFINET IO interface with IO device function (slave) ► Includes all analog and digital components of a powerful PROFINET IO interface connection ► Simple data transfer via I/O level ► Complies with the real-time classification (RT) of the PROFIBUS user organization ► Thanks to the standardized hardware and software interface to the KE350, KE350G IL and the CS351, it can be easily exchanged with other fieldbus modules of the same type.

	Slot	Fieldbus/designation	Code	Order no.	Description
	A	EtherNet/IP	IMenip	0 608 830 271	► Complete EtherNet/IP interface with adapter function (slave), includes all analog and digital components of a powerful EtherNet/IP connection ► Simple data transfer via I/O level ► Certified module tested for interoperability with leading EtherNet/IP scanner modules ► Thanks to the standardized hardware and software interface to the KE350, KE350G IL and the CS351, it can be easily exchanged with other fieldbus modules of the same type.
	A	ModbusTCP	IMmtcp	0 608 830 273	► Complete ModbusTCP interface with server function (slave) ► Includes all analog and digital components of a powerful ModbusTCP interface connection ► Simple data transfer via I/O level ► Thanks to the standardized hardware and software interface to the KE350, KE350G IL and the CS351, it can be easily exchanged with other fieldbus modules of the same type.
	B	24 V I/O interface	IM24V	0 608 830 259	► Enables control over the tightening system and output of 24 V status signals via a 24 V interface ► Insertion in a corresponding slot on the KE350 or KE350G IL or the SE352M control unit ► Provides 10 inputs and 13 outputs. The outputs are short circuit-proof and protected against reverse polarity. ► Complies with DIN 19240.

Rexroth cables: consistent, digital data transfer

Precise control and consistently reliable measurements for checking tightening results are the outstanding features of tightening systems from Rexroth. This level of precision requires data transport that is always error-free. This is why the tightening systems from Rexroth are equipped with fully digital data communication.

- ▶ Secure and reliable data transfer thanks to digital technology
- ▶ Maximum cable length of up to 100 meters enables flexible hall design
- ▶ Connection cables for tightening spindles are suitable for robot use
- ▶ Customer-specific cable lengths available

- ▶ Connection cables for joining tightening spindles with compact or modular systems
- ▶ Connection cables for joining hand-held nutrunners with compact or modular systems
- ▶ Extension cables for extending connection cables of tightening spindles with compact and modular systems
- ▶ Network coupler cables for connecting multiple modular systems
- ▶ Measurement transducer cables for connecting individual components of a tightening spindle
- ▶ USB programming cable for connecting a PC with compact or modular systems
- ▶ Mains connection cables for joining compact systems with a power socket (included in the scope of delivery in Europe)

Cables for tightening spindles

Tightening spindle connection cable

The tightening spindle is connected to the CS351S... Compact System or the LTS350D servo amplifier via a connection cable. Up to 5 extension cables may be connected to the connection cable one after the other

in any order. For applications where the tightening spindle is in constant motion, we recommend constructing the connection from several individual parts. The minimum bending radius for the listed connection cables is 132 mm. Max. length of the connection cable:

- When connecting to a system box or card rack: 100 m
- When connecting to a Compact System: 50 m

Connecting card racks and system boxes

The network coupler cables connect individual BT356 card racks and SB356 system boxes. A combination of card racks and system boxes is also possible. The length of the network coupler cable between the individual card racks / system boxes can be as much as 50 m. The total length of all network coupler cables may not exceed 150 m.

Note

To ensure function and system reliability at all times, only use the cables listed here. The connection cables for tightening spindles are suitable for robot use.

The complete package: software and operating system

Convenient programming and analyzing: with the PC via the network or with the laptop on-site. This provides a flexible working environment and allows you to generate tightening programs as well as analyze tightening cases and conduct system tests. The user interface enables intuitive operation.

- ▶ Fast commissioning thanks to intuitive menu design
- ▶ Time-saving and mix-up-proof thanks to automatic detection of electronic components
- ▶ Simple entry of tightening process parameters
- ▶ Comprehensive selection of target and monitoring functions for adaptation to the individual tightening case
- ▶ Evaluation options using graphs and statistics for process optimization

Programming

- ▶ System installation and programming of individual tightening tasks via convenient, icon-supported tools
- ▶ Configuration of tightening processes on the graphic interface
- ▶ Target and monitoring parameters are easily entered in the preset windows

Analysis

- ▶ Tightening graph for performing a quick tightening case analysis
- ▶ Good range with clear display of the state of the tightening results in the target window
- ▶ Histogram provides a quick overview of the statistical distribution of the tightening results

BS350 operating system

- Software for actuation, programming, and monitoring of tightening processes

Intuitive, reliable tightening processes

System installation and programming of individual tightening tasks is done via convenient, icon-supported tools. Tightening processes are configured on the graphic interface.

You can easily enter target and monitoring parameters in the preset windows.

Graph
The tightening graph helps you quickly analyze tightening cases.

Good range window
The good range window clearly shows you the location of tightening results in the target window.

Histogram
The histogram gives you a quick overview of the statistical distribution of the tightening results.

System requirements

Windows 2000, Windows XP, Vista or Windows 7. Pentium®, or compatible microprocessors with at least 500 MHz and a minimum of 128 MB RAM. At least 100 MB of free hard drive memory. Graphics resolution: 1024x768. Connection to tightening system: via USB or Ethernet.

Rexroth is constantly adapting its products to meet the latest technological standards and thus retains the right to change its software and firmware. Find out about the latest software as well as software and firmware updates on the Internet at: www.boschrexroth.com/tightening

IndraWorks – the tool for all engineering tasks

- ▶ Engineering framework for all Rexroth automation systems
- ▶ The tool for all engineering tasks

Features

- ▶ Available for all systems and solutions from Rexroth
- ▶ Integrated framework for all engineering tasks
- ▶ Consistent operating environment for project planning, programming, visualization, and diagnostics
- ▶ Central project management with intuitive system navigation
- ▶ Intelligent operation with wizard support
- ▶ Comprehensive online help
- ▶ Uniform programming according to the PLC standard IEC 61131-3
- ▶ PLCopen-conform function block and technology libraries
- ▶ Standardized interfaces for communication
- ▶ Transparent access to all system components
- ▶ Integrated FDT/DTM interface for integration of the DTM of third-party manufacturers

Rexroth IndraWorks allows you to solve all tasks in a uniform and intuitive software environment – from project planning and programming to visualization and diagnostics.

The uniform engineering framework IndraWorks is consistently available for all systems from Rexroth. You, as user, profit from fast and transparent access to all functions and system data of the automation components.

The standardized tools and interfaces help you to solve all engineering tasks centrally with a single software.

Project development

The overall system is uniformly and consistently projected for all solutions. User and multi-project management are available in all instances. The project and device explorers provide access to all system components. With its clearly organized dialog boxes, IndraWorks guides you intuitively through the configuration of your system.

Programming

The IndraLogic runtime system that is integrated in all solutions is consistently programmed in IndraWorks. The complete language scope specified in IEC 61131-3 is available. System-specific additional functions, such as motion blocks according to PLCopen or technology blocks, can be quickly and transparently implemented in your logic programs.

Tools

The tools for all engineering tasks are integrated in IndraWorks. Additional solution-specific tools are consistently available in the software framework.

IndraWorks for 350 Tightening System	SWA-IWORKS-ML*-12VRS-D0-DVD**	R911334632

You can find information on IndraWorks for the 350 Tightening System in the Internet at www.boschrexroth.com/tightening.

Customized solutions

- Handling devices with torque support for tightening spindles and ErgoSpin hand-held nutrunners.

- Telescopic balancer for fatigue-free work with hand-held tightening spindles thanks to low displacement resistance.

- Fully automatic tightening stations – also with nutrunner supply – that can be completely integrated into production lines.

- Worker guides and automated solutions for all aspects of the tightening position.

Rating of a tightening connection

The basic value for the rating of a tightening connection is the clamp force required to ensure the functioning of the tightening connection. Clamp force F_k must always be greater than the acting force F_A to be expected in operation ($F_k > F_A$).

The maximum number of bolts and their maximum thread value result from the design conditions, i.e. the space available for the bolts. A maximum permissible force of F_{max} can be calculated taking into consideration the stress cross-section of the bolt and the number of bolts. With currently available technology it is not possible to directly measure the clamp force (pretensioned force) during the tightening process. Therefore, it is necessary to rely on torque and angle of turn instead. Especially

in the case of torque-controlled tightening processes the clamp force is strongly influenced by the friction under the bolt head and in the threads. A tightening connection should be designed so that the minimal attainable pretensioned force $F_{M_{min}}$ guarantees the functioning of the tightening connection, but the maximum pretensioned force $F_{M_{max}}$ does not destroy the tightening connection or bolt. In order to be able to make a statement as to how the cited values will affect the mounting clamp force, the tightening factor $\alpha A = \frac{F_{M_{max}}}{F_{M_{min}}}$ was established in VDI 2230.

Example:
M10 DIN 912-12 g μ total = 0.14-0.18

Clamping force table according to VDI 2230

Size	Prop. class	Mounting clamp forces $F_{M Tab}$ in kN for $\mu_G =$							Tightening torques M_A in Nm for $\mu_K = \mu_G =$

Guide values for clamp forces (FM) and tightening torques (MA) for headless bolts with metric coarse-pitch threads according to DIN ISO 262 and head dimensions

for hexagon bolts according to DIN EN ISO 4014 to 4018 or fillister head bolts according to DIN EN ISO 4762, and "central" hole according to DIN EN 20 273.

Glossary

Output drive	Spindle components that include the tightening tool (e.g. tightening nut).	Handling device	Manually-operated, hand-held tightening modules which the worker uses to approach the tightening position and carry out the tightening operation without exerting any force. Depending on the design, the handling device can also support the reverse torque (reaction torques).
Multiple connections	Minimum permissible distance between the tightening positions.	IEC 61131-3	Internationally recognized standard for programming languages of programmable logic controllers.
Working range	Permissible torque range of tightening spindle/ErgoSpin.	Max. output drive speed	Defined by the interaction of EC motor, planetary gearbox and output drive.
Size (BG)	Tightening spindles are available in sizes 2–5, the sizes cover different working ranges.	Measurement transducer	Spindle component that analyzes the torque, angle, and gradient and is equipped with an integrated cycle counter.
Block output drive	Combines multiple installation spindles for tight hole templates or small circle diameters.	Redundant measurement transducer	At least two independent measurement transducers that continually record the same parameters.
DVI	Digital Visual Interface – interface for the digital transfer of video data.	Center-to-center distance	See multiple connections
I/O	Input/output – I/O are discrete interfaces for sending and receiving digital signals.	Tightening case analysis	Analysis of torque and angle-of-turn measurements taken during tightening, on the basis of which conclusions about the tightening process and the quality of the tightening connection can be made.
EC Motor	Electronic Commutated motor – a brushless, and thus maintenance-free, motor.	Tightening channel	Includes all components required for a tightening job: tightening spindle or ErgoSpin hand-held nutrunner, connection cable, as well as control and power electronics.
ErgoSpin	A hand-held nutrunner designed according to the latest findings in ergonomics.	Tightening program	Controls the tightening process and is divided into various tightening steps, where tightening parameters are set.
Range of spring	Travel output which results from engaging the tightening module and tightening until the screw-in depth is reached.		
Crowfoot wrench	Special components designed for very tight and hard-to-reach tightening positions.		
Gradient	Inclination of a tangent in the torque/angle of turn graph.		

Tightening spindle	Comprises an output drive unit, measurement transducer and a gearbox-motor combination for the drive and is used with hand-held and automatic tightening tasks.	System Stick	A USB stick included in the scope of delivery that contains, among other things, the installation program for the BS350 Operating System and the system documentation.
Tightening station	Hand-held, manually-operated, or automatic tightenings are carried out on a tightening station. It can be a part of an assembly line.	Avg. efficiency	Quotient calculated from output drive performance and drive performance. The output drive performance and drive performance depend on the speed and torque, which is why efficiency is not constant.
Tightening position	Refers to the defined location where the tightening job is performed using a tightening channel and a tightening program.	Offset output drive	Output drive component for tight center to center distances where the spline shaft and drive unit are offset.
Tightening system	A complete system with all of the tightening channels that are needed to carry out the defined tightening case. It communicates with a superior controller.	Feed output drive	Output drive component for deep-seated tightening positions (e.g. motor plugs).
IP54 protection class	Suitability of components for certain ambient conditions, e.g. for industrial systems. IP54 refers to the protection against splash water and dust.	Tool mount	Interface between the tightening spindle and tool. For example, a square is a typical tool mount for a tightening nut as a tool.
Spindle bearing	Output drive component with straight spline shaft which supports the tightening tool (e.g. tightening nut).	Angle head	Output drive components which are used from above, usually on the hand-held nutrunner, if there is limited space available (e.g. inner housing tightening).
Socket tray	Container for various tool inserts. Corresponding tightening programs are activated when the tools are removed	Feed gripper	Component used to store and supply bolts to the tightening tool.
Controllers	Controls and monitors the tightening process or exchanges data with superior controllers.
